Nonlinear Problems in Mathematical Physics and Related Topics I: In Honor of Professor O. A. Ladyzhenskaya (International Mathematical Series) Michael Sh. Birman, Stefan Hildebrandt, Vsevolod A. Solonnikov, Nina N. Uraltseva

The new series, *International Mathematical Series* founded by Kluwer / Plenum Publishers and the Russian publisher, Tamara Rozhkovskaya is published simultaneously in English and in Russian and starts with two volumes dedicated to the famous Russian mathematician Professor **Olga Aleksandrovna Ladyzhenskaya**, on the occasion of her 80th birthday.

O.A. Ladyzhenskaya graduated from the Moscow State University. But throughout her career she has been closely connected with St. Petersburg where she works at the V.A. Steklov Mathematical Institute of the Russian Academy of Sciences.

Many generations of mathematicians have become familiar with the nonlinear theory of partial differential equations reading the books on quasilinear elliptic and parabolic equations written by O.A. Ladyzhenskaya with V.A. Solonnikov and N.N. Uraltseva.

Her results and methods on the Navier-Stokes equations, and other mathematical problems in the theory of viscous fluids, nonlinear partial differential equations and systems, the regularity theory, some directions of computational analysis are well known. So it is no surprise that these two volumes attracted leading specialists in partial differential equations and mathematical physics from more than 15 countries, who present their new results in the various fields of mathematics in which the results, methods, and ideas of O.A. Ladyzhenskaya played a fundamental role.

Nonlinear Problems in Mathematical Physics and Related Topics I presents new results from distinguished specialists in the theory of partial differential equations and analysis. A large part of the material is devoted to the Navier-Stokes equations, which play an important role in the theory of viscous fluids. In particular, the existence of a local strong solution (in the sense of Ladyzhenskaya) to the problem describing some special motion in a Navier-Stokes fluid is established. Ladyzhenskaya's results on axially symmetric solutions to the Navier-Stokes fluid are generalized and solutions with fast decay of nonstationary Navier-Stokes equations in the half-space are stated. Application of the Fourier-analysis to the study of the Stokes wave problem and some interesting properties of the Stokes problem are presented. The nonstationary Stokes problem is also investigated in nonconvex domains and some L_p -estimates for the first-order derivatives of solutions are obtained. New results in the theory of fully nonlinear equations are presented.

Some asymptotics are derived for elliptic operators with strongly degenerated symbols. New results are also presented for variational problems connected with phase transitions of means in controllable dynamical systems, nonlocal problems for quasilinear parabolic equations, elliptic variational problems with nonstandard growth, and some sufficient conditions for the regularity of lateral boundary.

Additionally, new results are presented on area formulas, estimates for eigenvalues in the case of the weighted Laplacian on Metric graph, application of the direct Lyapunov method in continuum mechanics, singular perturbation property of capillary surfaces, partially free boundary problem for parametric double integrals.

From reader reviews:

Christine Curnutt:

Book is to be different per grade. Book for children until eventually adult are different content. As you may know that book is very important for us. The book Nonlinear Problems in Mathematical Physics and Related Topics I: In Honor of Professor O. A. Ladyzhenskaya (International Mathematical Series) ended up being making you to know about other understanding and of course you can take more information. It is rather advantages for you. The reserve Nonlinear Problems in Mathematical Physics and Related Topics I: In Honor of Professor O. A. Ladyzhenskaya (International Mathematical Series) is not only giving you a lot more new information but also being your friend when you sense bored. You can spend your personal spend time to read your reserve. Try to make relationship using the book Nonlinear Problems in Mathematical Physics and Related Topics I: In Honor of Professor O. A. Ladyzhenskaya (International Mathematical Series). You never truly feel lose out for everything should you read some books.

Demarcus Bechtel:

Here thing why that Nonlinear Problems in Mathematical Physics and Related Topics I: In Honor of Professor O. A. Ladyzhenskaya (International Mathematical Series) are different and trustworthy to be yours. First of all studying a book is good nevertheless it depends in the content of it which is the content is as delicious as food or not. Nonlinear Problems in Mathematical Physics and Related Topics I: In Honor of Professor O. A. Ladyzhenskaya (International Mathematical Series) giving you information deeper including different ways, you can find any publication out there but there is no reserve that similar with Nonlinear Problems in Mathematical Physics and Related Topics I: In Honor of Professor O. A. Ladyzhenskaya (International Mathematical Series). It gives you thrill looking at journey, its open up your current eyes about the thing which happened in the world which is might be can be happened around you. You can actually bring everywhere like in recreation area, café, or even in your technique home by train. In case you are having difficulties in bringing the published book maybe the form of Nonlinear Problems in Mathematical Physics and Related Topics I: In Honor of Professor O. A. Ladyzhenskaya (International Mathematical Series) in e-book can be your alternate.

James Sanford:

The reason? Because this Nonlinear Problems in Mathematical Physics and Related Topics I: In Honor of Professor O. A. Ladyzhenskaya (International Mathematical Series) is an unordinary book that the inside of the reserve waiting for you to snap that but latter it will shock you with the secret that inside. Reading this book next to it was fantastic author who else write the book in such amazing way makes the content inside of easier to understand, entertaining means but still convey the meaning entirely. So , it is good for you for not hesitating having this any longer or you going to regret it. This amazing book will give you a lot of benefits than the other book have got such as help improving your proficiency and your critical thinking method. So , still want to hold off having that book? If I were being you I will go to the e-book store hurriedly.

Phillip Elliott:

That reserve can make you to feel relax. This book Nonlinear Problems in Mathematical Physics and Related Topics I: In Honor of Professor O. A. Ladyzhenskaya (International Mathematical Series) was vibrant and of course has pictures around. As we know that book Nonlinear Problems in Mathematical Physics and Related Topics I: In Honor of Professor O. A. Ladyzhenskaya (International Mathematical Series) has many kinds or variety. Start from kids until teens. For example Naruto or Private investigator Conan you can read and think you are the character on there. Therefore not at all of book are make you bored, any it offers you feel happy, fun and unwind. Try to choose the best book to suit your needs and try to like reading in which.
